

New to Our Staff

Glenn joined us at the beginning of the year as a product development engineer to help with all mechanical projects and with finishing the transmitters.

Glenn and his wife Gerry relocated to Maryland from Silicon Valley. They made a conscious decision to get out of the rat race of large research corporations and were attracted to Maryland by the quality of life and job opportunities.

In his spare time, Glenn builds and flies model airplanes. He also enjoys gardening—especially cultivating unusual varieties of hot peppers (he always employs environmentally friendly gardening methods).

A cat named Toto is an important part of Glenn's life. He describes Toto as a California surfer-cat—because of Toto's appearance, not his recreational habits. Toto was orphaned at three days old and Glenn and Gerry hand raised him and his litter mates. Glenn confides that he has many Toto stories.

Scholarship Awards

As part of our celebration for our tenth anniversary, we are offering two \$500 scholarships.

Do you know of a deserving high school student, graduating in 2001, who plans to major in Biology or Wildlife Management and who is involved in community service? If so, please email us at microwt@aol.com for an application form and a copy of the rules. An independent panel of researchers will choose the winners who will be featured in our summer 2001 newsletter. All applications must be postmarked by March 29, 2001.
